PROFILE	Six-month final-year internship from February 2027, in application security, DevSecOps or cloud security		
	Java / Spring developer with a security focus. At Orange I found and fixed a vulnerability, then took charge of the security side of the platform I was building: STRIDE threat modelling, OAuth 2.0, hardening of the CI/CD chain.		
SKILLS	Application security	OWASP Top 10, OWASP Top 10 for LLMs, OWASP ASVS, STRIDE threat modelling (Threat Dragon), CWE / CAPEC, OAuth 2.0 / JWT, security code review, Burp Suite	
	DevSecOps	GitLab CI/CD, Jenkins, SonarQube (SAST), dependency analysis (SCA), secrets management, artefact integrity (SHA-256), Docker, Nexus	
	Cloud & infrastructure	AWS (EC2, IAM, VPC), OpenNebula, Cloud Foundry / PaaS, Nginx, WireGuard, iptables, Fail2Ban, TLS	
	Development	Java 17 / Spring Boot, Python, Bash, SQL, C, C#, Angular, Go, MongoDB, OpenTelemetry	
	Governance	Working knowledge of ISO/IEC 27001, 27002, 27005	
EXPERIENCE	Engineering intern — Application security, test automation and CI/CD		May — Aug. 2026
	Orange • Arcueil, France • Java backend team, business-critical applications		
	- Designed and industrialised an internal regression-test automation platform: Java engine, REST API and web UI, wired into the GitLab CI/CD pipelines and secured with OAuth 2.0 Client Credentials. Around ten campaigns of several hundred tests every day Hybrid coverage analysis (JavaParser, JaCoCo, OpenTelemetry) and a Go service collecting the traces, fed back into the module by CI; since requested by other teams Found and remediated a vulnerability, spotted while instrumenting an internal application: impact analysis, fix, configuration review, anonymised write-up Owned the security of the platform, on my own initiative: STRIDE threat model (Threat Dragon), protected secrets, third-party binary checked against its SHA-256 digest, with the build blocked on any mismatch		
	Sales operations — Balluff EMEA, Serris • order management in SAP		Summer 2025
	Ride operator — Disneyland Paris, Chessy		Summer 2023
PROJECTS	agent-memory-security — poisoning the memory of an AI agent		2026
	Personal project • open source (MIT) • Python, SQLite, pytest		
	Runnable demonstrator: an instruction slipped into a document the agent reads becomes a stored memory, resurfaces later and leads the model to propose a tool call. Defence compared on the same scenario: every memory keeps its origin, and only an authorised origin allows an external effect		
	Hardened CI/CD infrastructure on AWS — ESIEE Paris • containerised Jenkins / SonarQube / Maven /		2026
	Nexus pipeline, EC2, Nginx, PostgreSQL, WireGuard, iptables, Fail2Ban, HTTPS		
	NeXusGate — access gate using 3D facial recognition		2025
	ESIEE Paris, Noisy-Champs • Lead network developer		
	Token-protected Flask REST API on a Raspberry Pi, remote access through a Cloudflare tunnel with no open port, Kinect video streaming; biometric data processed in line with GDPR art. 9		
	BEST TECHNICAL PROJECT, ESIEE 2025 • 75+ PROJECTS		
EDUCATION	Engineering degree in cybersecurity (MSc level)		2022 — 2027
	ESIEE Paris, Noisy-Champs • SecNumedu label awarded by ANSSI, the French national cybersecurity agency		
	Exchange programme (5 months)		Sept. 2024 — Jan. 2025
	Ming Chi University of Technology • New Taipei City, Taiwan		
LANGUAGES	French native • English B2, T0EIC 925 • Spanish B1 • Mandarin A2		
	Projet Voltaire — score 856, business level (French written proficiency)
